

International Bureau:

Teleglobe America Inc. requests an International Signalling Point Code for Los Angeles to use as follows:

Teleglobe America Inc. is planning to deploy a Cisco PGW equipped with an International Point Code for service to International VoIP Clients. This new PGW and associated Signalling Link Terminal (SLT) will be physically located at the Teleglobe site at 1200 7th Street, Suite L2-230, Los Angeles, CA 90017. The estimated implementation date is March 10, 2006.

(Teleglobe has an International Signalling Point Code that it uses in its existing voice switch in Los Angeles (a Nortel GSP), used for traditional voice services, but that point code cannot also be used with the new Cisco PGW equipment.)
